Description:

Atlas of Procedures in Neonatology, Fifth Edition

Neonatal intensive care demands sound decision-making and rapid responses. By blending the illustrative power of an atlas with detailed, stepwise procedural descriptions, this practical resource covers a range of technique-specific interventions and prepares you for the challenges of the neonatal intensive care nursery.

Speed response time, prevent errors, and improve outcomes for your youngest patients!

- Expert guidance from noted experts highlights each step of each procedure, helping to minimize errors and promote safe practice standards.
- Three animations offer stepwise visual guidance on exchange transfusion, emergency evacuation of air leaks, and endotracheal intubation.
- Over 150 color photographs clarify important principles, problems, and complications.
- Video clips address both common neonatal care procedures, such as umbilical line placement, PICC placement, and endotracheal intubation, *and* vital emergency procedures such as exchange transfusion and cardiac paracentesis infrequently performed.

NEW to the Fifth Edition...

- New chapters keep you current with the latest developments in Brain and Whole Body Cooling, Bubble CPAP, and Educational Principles of Simulation Based Procedure Training.
 - Expanded video collection includes lumbar puncture, radial artery puncture, intraosseous infusion, bubble CPAP, and pericardiocentesis.
 - Online companion website lets you access fully searchable text, image bank, and videos anytime, anywhere.
