## Description:

If you've ever been frustrated growing roses in cold climates, and using organic techniques, this is your answer. Award winning garden author Doug Green grows tender hybrid tea roses in his USDA 4 garden without any winter protection and has been doing so for over 20 years now. Not only hybrid teas but other tender roses grace his gardens without any winter protection Doug wrote the best-selling paper book on these techniques and has brought this information to ebooks with this edition. He has updated all the information, added relevant information asked by readers over the years and eliminated the material traditional publishers like to add to pad out the book. What's here is the result of over 30 years of rose growing in tough winter climates (Canada) and clear instructions about how to duplicate his success. This information comes from an experienced gardener, nurseryman and award winning author and is sure to revolutionize the way you grow your roses. The techniques are all organic and because of the way the roses are grown, Doug does not spray his roses for diseases (although he has to control for insect pests - and he tells you how to do this organically as well).
