Description:

From Library Journal Electricity is one of the least understood yet most important aspects of do-it-yourself building and renovation. Used safely, it allows us to enjoy a life of convenience, but when its basic rules are violated it can destroy one's home. A master electrician, building inspector, and licensed general contractor, Cauldwell shows how to properly use electricity in this revision of his 1996 text. Starting with electricity's basics, he then explains tools of all types, shows how and where electricity enters the house, and explains grounding (which is vital for safety). Proceeding through the house, Cauldwell demonstrates how to wire both new construction and renovations and to install receptacles, switches, fixtures, and wired-in appliances. Important safety information is provided, including ground-fault circuit interrupters, lightning, and surge protection. Finally, Cauldwell gives instructions for wiring "Above Code," his system of wiring that exceeds the minimum standards required by the electrical code and results in a safer, higher-quality installation. This title does an outstanding job of explaining an area of perennial confusion for do-it-yourselfers. Recommended for

every collection.

Review Master electrician Cauldwell has been wiring houses for almost thirty years and is in a fine position to explain the job. From avoiding the wrong materials to designing new wiring and working with old, *Wiring a House* focuses on safety and long-term durability alike, telling how to work with both new and old construction. An invaluable guide. -- *Midwest Book Review* --This text refers to an out of print or unavailable edition of this title.
